PROFILE

Customer-focused founder and app developer creating mobile applications and business operations software through an AI-assisted workflow. Combines product design, backend configuration, and technical troubleshooting with thoughtful customer communication and practical service-business experience. Directs development with clearly defined requirements, detailed internal security and privacy reviews, targeted testing, and documented findings and retests. Maintains organized project records, release plans, and handover documentation to make the work traceable and support ongoing improvement and future buyer diligence.

EXPERIENCE & PRODUCT DEVELOPMENT

Founder & Lead Developer | The Laundry Concierge Co.

2025-Present

- Designed and developed native iOS and Android customer and provider apps for a laundry-service platform, giving independent providers tools to operate and grow a personal service business.
- Built onboarding, booking, scheduling, chat, and Stripe payment workflows, plus marketing kits, referral codes, and favorite-provider features. Shaped pricing and provider tools around fair, sustainable earnings and repeat business.
- Built TLC Grow as a central business operations app, bringing together customer and provider administration, order management, support, invoicing, financial reports, and marketing tools.
- Created campaign management and analytics workflows to track spend, customer and provider signups, onboarding, and paid activity using recorded attribution; made missing or uncertain data visible in reports.
- Defined customer, provider, order, and payout relationships in PostgreSQL; configured Supabase authentication, storage, and role-based access. Troubleshoot dependencies across interfaces, backend services, and service rules.
- Use OpenAI Codex to break complex requirements into scoped implementation tasks, investigate faults, and develop code, QA tests, and documentation. Direct the workflow, review proposed changes, and verify behavior before treating work as complete.
- Review application and database permissions, test authorization boundaries, and document findings, fixes, and verification results. Created a project HQ organizing roadmaps, operating records, and security and business-readiness workstreams for future buyer diligence and handover.
- Personally handle many customer questions and concerns, crafting clear, professional, and personal responses that help customers feel heard and understand what happens next.

Founder & Lead Developer | You In?

June 2026–Present

- Led product design and development of a Flutter social-planning app connecting availability sharing, group coordination, scheduling, and messaging.
- Defined and documented project deliverables, milestones, and feature requirements with the client; developed the app against those commitments and communicated progress, revisions, and outstanding issues throughout the project.
- Worked through interdependent authentication, scheduling, data-access, and interface requirements; refined features through testing to make complex coordination workflows intuitive to use.
- Use Codex to explore implementation options, troubleshoot connected frontend and Supabase issues, and develop targeted fixes and tests. Check proposed solutions against intended user behavior and data-access requirements.
- Conducted internal functional, privacy, and permissions reviews, including multi-user access checks. Organized findings, remediation, retest evidence, and release plans in a project HQ to make development and future handover easier to follow.

Chimney Technician / Field Lead | Idaho Fireplace & Chimney

Boise, ID | 2019–2026

- Diagnosed and resolved residential system issues using technical manuals, manufacturer specifications, and building codes.
- Managed customer communication, scheduling, quotes, materials coordination, and service execution; trained junior technicians in field procedures.

Website & SEO Support | WTC Marketing

Boise, ID | 2015 • Approximately 9 months

- Updated 20+ company-built websites for small-business clients to improve search engine optimization.
